

parabolic dish feeder

antenna overview

The new PARABOLIC series feeder is made base on waveguide design. Horn shape made of aluminum makes them unique on the wireless antenna market. Excelent electrical specifications give signal with parabolic dishes as follows: 29dBi with 60cm dish; 32dBi with 90cm and as much as 35dBi with 120cm dish.

key features

- very strong signal with highest reliability
- perfect radiation characteristic covers 5.1GHz to 6Ghz band with VSWR below 1.5:1

technical specification

Electrical

Gain.....xx, 29-35 dBi
 Frequency.....5100 - 5900 MHz
 Polarization...horizontal or vertical
 VSWR (max).....1.5:1
 Impedance.....50 OHm

Mechanical

Socket/Plug.....NF
 Dimension.....133 x 86 mm
 Weight.....ALU PA6 / 0,24 kg
 Mounting.....fi 40
